

How To Make Silk Screen Stencils

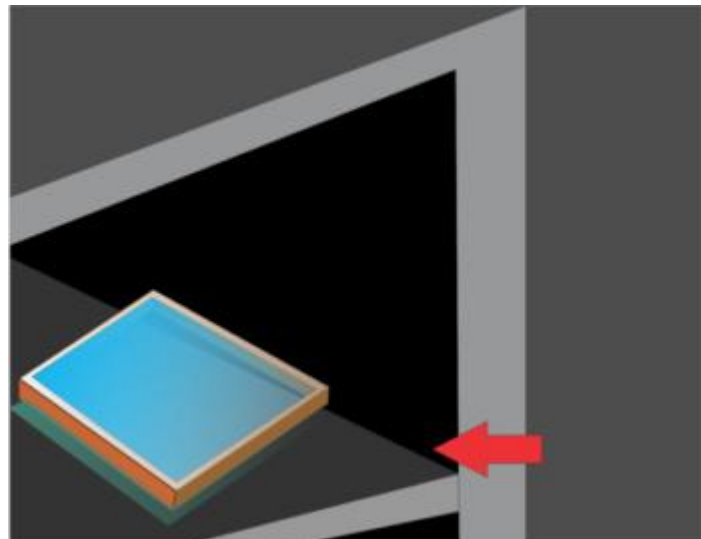

1. Create a design on the computer or draw and scan in your design.

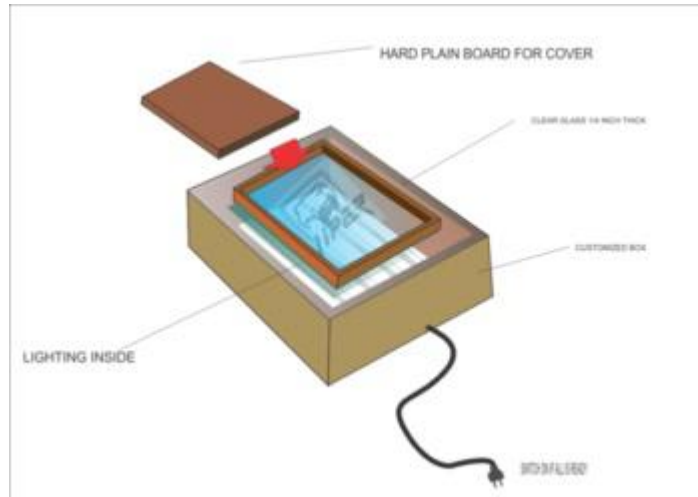

2. Print your design onto a transparency sheet.

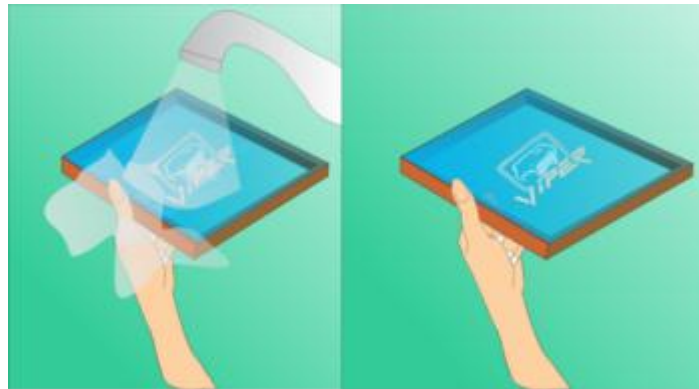

3. Cover each side of your screen with a thin layer of emulsion. You can use a squeegee to spread the emulsion evenly on both sides.

4. Place the screen in a dark room or box for approximately 2 hours until the emulsion is thoroughly dry.

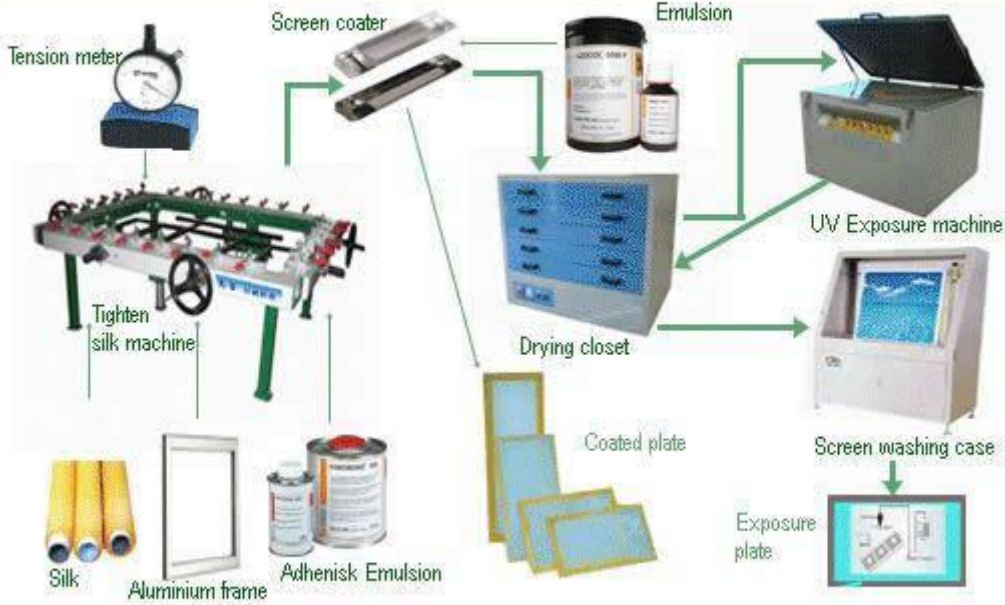

5. Put the transparency stencil on the screen and apply pressure with a piece of clear glass to make sure the stencil stays flush with the screen.

6. Wash out the screen with cold water.
